Amman – Jordan

Research experience and publications:

Thesis research :

“Oral Inflammation in Solid Organ Transplant Patients”

This cross-sectional study examines the prevalence of periodontal disease in a sample of cardiac and renal transplant patients. It also examines the relationship between periodontal disease, as a marker of host hyper-inflammatory phenotype, and chronic allograft failure in a subsample of renal transplant patients. The study also examined the relationship between periodontal disease and the systemic inflammatory marker status in this patient population.
