Year: 1st year- Second Semester

Credit: 1 credit hour

Prerequisite for: fields of dental practice particularly Prosthodontics & Conservative Dentistry

Course Objectives:

This course delineates the fundamentals of functional tooth form through drawings and carvings. It clearly pinpoints the critical landmarks--particularly those of posterior teeth. Models of the eight typical tooth forms are used to demonstrate the differential anatomy of individual teeth. Detailed instructions are offered on drawing teeth to scale and on carving them in wax.

Therefore, this course provides the following objectives:

- Demonstration of drawings of the right maxillary and mandibular permanent teeth from the mesial, occlusal, distal, lingual and buccal views.
- The evaluation of contours of simulated dental restorations in relation to ideal arch form.
- Thorough discussion of the evaluation of temporomandibular joint and muscle disorders including anatomical illustrations of the nerves and muscles of the head and neck region.
- Dimensions of teeth from all aspects in relation to space and arch size.
- Detailed descriptions and illustrated morphologic features of usual teeth essential for learning biologic variation of tooth morphology.
Demonstration of radiographs and pulp chamber and canal morphology in sectioned teeth provide an excellent reference for root canal therapy.

Histological description with slide demonstrations that covers all micro-morphological landmarks.

Learning Outcomes:

Successful completion of this module should lead to the following learning outcomes:

A. Knowledge and Understanding (student should)
   A1) Be able to describe and draw root and crown contours in order to properly adapt instruments required to clean these surfaces.
   A2) Be able to describe and differentiate histological tooth sections.

B. Intellectual skills - with ability to
   B1) Identify and differentiate each type of tooth
   B2) Employ definitive shifts in modern dental practice

C. Subject specific skills – with ability to
   C1) Reproduce acceptable tooth contours as required when eventually finishing and polishing, or placing restorations.
   C2) Communicate with the instructors, peers, and patients using understandable terminology and sketches when appropriate.

D. Transferable skills – with ability to
   D1) Strike the balance between self-reliance and seeking help when necessary.
   D2) Display an integrated approach to the deployment of communication skills.

Teaching methods:

- Duration: 16 weeks, 16 hours in total
- Practical session: 15 + one exam

Modes of assessment:

- Weekly achieved sketches and carvings: 60 points
- Final Exam: 40 points
**Attendance policy:**

Laboratory practice attendance is obligatory. The handout and recommended atlas are not comprehensive and additional material will be covered.

**Expected workload:** an average of studying time from 3 to 4 hours per week should be expected.

**Course Content & Weight:**
