Oral Healthcare at Students’ Dental Clinics During Coronavirus Pandemic: Clinical guide

This guide describes clinical steps and precautions that are needed for safe dental care during the COVID-19 pandemic. This guide is based on current understanding of the COVID-19 disease and intends to provide guidance for prevention of disease propagation. Information included in this guide are based on the best available knowledge and expert opinion available in the scientific literature at the time of writing the document. Content will be updated as new evidences emerge.

Content:

- General principles
- Patient admission
- Clinical environment
- Personal protective equipments
- Considerations for aerosol generating procedures (AGP).
- Considerations for non-aerosol generating procedures (non-AGP).
- Assessment zone information
- Patient information
- References
- Appendix 1 (Summary of PPE required in various clinical settings).
Oral Healthcare at Students’ Dental Clinics During Coronavirus Pandemic

This guide describes clinical steps and precautions that are needed for safe dental care during the COVID-19 pandemic. This guide is based on current understanding of the COVID-19 disease and intends to provide guidance for prevention of disease propagation.

General principle:

People with COVID-19 may exhibit a wide range of symptoms causing mild to severe illness. Symptoms may appear 2-14 days after exposure to the virus.

People with one or more of the following symptoms may have COVID-19 infection (CDC, 2020c):

- Cough
- Sputum
- Sore throat
- Runny nose
- Wheezing
- Shortness of breath
- Chest pain
- Fever ≥ 38ºC/100.4 ºF
- Myalgia
- Joint pain
- Fatigue
- Abdominal pain
- Vomiting
- Diarrhoea
- Loss of taste
- Loss of smell
- Headache

ONLY LOW-RISK PATIENTS will be clinically managed at students’ dental clinics according to the following criteria:

<table>
<thead>
<tr>
<th>High risk patients</th>
<th>Low risk patients</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tested positive for COVID-19</td>
<td>Tested negative for COVID-19</td>
</tr>
<tr>
<td>Showing symptoms (see above 1-4)</td>
<td>No COVID-19 symptoms</td>
</tr>
<tr>
<td>Have been in contact or isolation with suspected or diagnosed cases</td>
<td>Not been in contact with suspected cases</td>
</tr>
<tr>
<td>Travelled internationally in the last two weeks</td>
<td>No travel in the last 14 days</td>
</tr>
<tr>
<td>Recovered from COVID-19 infection</td>
<td></td>
</tr>
</tbody>
</table>
If you or your patients have any of the following symptoms, please **DO NOT** come to the appointment:

- Cough
- Fever (> 38 c) (Patients with a temperature of 37.5 will be retested within 15 minutes; if temperature remained 37.5 or more, reschedule the appointment)
- Sore throat
- Rhinorrhoea
- Fatigue
- Loss of taste or smell sensation
- Runny nose
- Chest pain

**Patient admission (Figure 1)**

- Only patients with phone-booked appointments are allowed.
- Patients should be called by phone the day before their appointment date and given necessary instructions about safety and transport policy.
- Inform the patient not to bring any escort. Only a guardian or one person if assistance is required. This is important to minimize contact.
- To facilitate adequate physical distancing, it is important to remind patients to come on time. In case a patient arrives early, ask to wait in the car, or outside the dental department until the appointment time.
- Patients should be informed not to take any temperature lowering drugs prior to the appointment.
- Only patients who have clearance from “Assessment Station*” are allowed to get into the clinical area.
- Make sure that patient’s details including: full name (in Arabic), exact address, I.D number, and telephone number are correctly recorded on the triage card and in the patient’s file.
- Patient’s file should be placed in drawer and not kept on the working bench.

*Screening stations will be placed in front of elevators and main doors, and will be handled by the COVID team interns.
Clinical environment

Reception zone (Area in front of the two main doors and elevators):

- Patient temperature will be checked by COVID-19 team members at the point of entrance. If the temperature is 37.5°C or less they will be directed to the main reception area where hand sanitization will be required, masks will be provided if needed.
- Except for children under 6 years old, all patients are to wear masks in the dental department. Patients are to take off the mask only when seated on the dental chair just before examination and during the treatment.

Waiting areas

- Keep doors open to avoid the use of door handles and allow ventilation.
- Chairs in the waiting area to be rearranged to leave a 1.5-meter distance between each other.
- Remove all magazines and leaflets (if any!)
- Minimize the waiting time by preparing appointments well in advance and advising the patients to arrive on time.
- On a regular schedule (i.e. after each clinical session), wipe all touchable surfaces with available surface disinfectant

The dental clinics

- Clean and disinfect room surfaces promptly after completion of clinical care.
- Maintain a minimum of 10 minutes between appointments in a manner that guarantees enough time to disinfect all surfaces inside the examination or treatment area before the next patient arrives.
- Ensure that cleaning and disinfection procedures are followed consistently and correctly
- The sanitizing of surfaces in clinical environments should follow these guidelines:
  1. Start with the least contaminated area and proceed to the most contaminated
  2. Start at the top and move downwards
  3. Start inside and move outwards
- Places that should have mechanical barriers (PVC films or plastic bags) include:
  1. Computer keyboards and any other input device such as a mouse
  2. Manual triggers
  3. Spotlight handles
4. Headrests

5. Dental chair arms

6. Dental chair rest

7. High speed hand pieces

8. Triple syringe body

9. Tip of suction units

- Surfaces such as benches and auxiliary strollers should be covered by disposable and impermeable barriers.
- Remove all unnecessary material, instruments and equipment from the countertops in the clinic.
- Have the patients, both adults and children (age 6 year and older), use a pre-procedure antiseptic mouth rinse (chlorhexidine or hydrogen peroxide) immediately before beginning a procedure.

**Staff (clinicians, nurses, assistants, students, technicians, administrative)**

- All staff will be screened for fever and COVID-19 symptoms on a daily basis. Temperature will be recorded, by COVID team, for all the staff coming for duty.
- No one can come in and go out wearing scrubs or white coat.
- Clinicians, nurses, students should wear the appropriate personal protective equipment (PPE) before the patient enters the clinic. The sequence for putting on PPE should be properly adhered to i.e., “gown, mask, face shield then gloves”
- After treatment, dispose of the PPE using the appropriate sequence “gloves, face shield, gown then mask.”
- Clinicians must have separate shoes for clinical activities, if not they must wear overshoes.
- Students are to take the scrubs home in a closed plastic bag for washing/cleaning.
- Keep a “reasonable distance” between you and your patient at all times.
- Place dental impressions in impression disinfectant available in the clinic for the required period of time depending on impression material.
- Indirect visualisation technique and correct positioning is mandatory.
- Keep the use of air/water syringe to minimal.
- After you complete the planned procedure, ask the patient to rinse his mouth for 40-60 seconds with chlorhexidine mouth wash.
- Ask the patient to wash his hands with soap and water for 20 seconds.
Figure 1: Journey of the patient from admission to discharge
Personal protective equipments (see figure 2 on how to wear PPE)

The PPE components include (CDC, 2020):

- Disposable gowns
- Surgical mask (N.B. For aerosol generating procedures, N95 mask is needed)
- Face shields/visors
- Goggles
- Disposable gloves
- Head covers and overshoes
- Clinicians, nurses, and students should not wear home clothes in the clinics.
Figure 2: steps for wearing PPE. Source: CDC (https://www.cdc.gov/coronavirus/2019-ncov/hcp/using-ppe.html)
CONSIDERATIONS FOR AEROSOL GENERATING PROCEDURES (AGP)

- AGPs on open plan clinics should be conducted in a zoned manner with only AGPs occurring on the clinic in question. This clinic should be clearly identified as conducting AGPs.

- All staff and students on the clinic should wear FFP3/N95, eye protection, and apron if not assisting or providing an operative intervention. If providing or assisting an operative intervention staff or student should be wearing a fluid resistant gown or coverall and gloves in addition to a FFP3 respirator/N95, and visor.

- Air change per hour should be ascertained and optimised as far as practically possible for the clinic in use.

- Patients should enter the clinic wearing a fluid resistant surgical mask and eye protection prior to the session beginning. The eye protection should stay in situ for the procedure and the mask replaced following the completion of procedure.

- If there is more than one exit they should then exit the clinic through the closest exit and dispose of the mask and either have the eye protection disinfected or dispose of it.

- Dental suction with a wide bore suction tip provided by an assistant is mandatory to reduce aerosol spread.

- Dependent on the local environment and ventilation screening between the chairs can be considered.

- Minimising the use of ultrasonic scalers through more use of hand scaling would be one practical method to increase the relative amount of chair space for AGPs.

- All procedures should have an operator, an assistant, and “runners” separate to the operating/assisting team in order to obtain any other equipment or consumables that have not been predicted to be needed in the pre-operative set-up period.

- Staff and students should not remove their FFP3 or visor until out of the aerosol area which dependent on the local clinical environment may be in safe areas near the exit of the clinic or outside the clinic zone. If the member of staff’s visor is contaminated during supervision of one procedure it must be appropriately cleaned prior to moving to any other supervisory act elsewhere on the clinic.

- Despite the very small risk of an open plan clinic it is possible to further enhance risk mitigation by redirecting patients who are extremely high risk of severe COVID-19 illness to closed clinical environments (i.e. See assessment zone information).
CONSIDERATIONS FOR NON-AEROSOL GENERATING PROCEDURES (AGP)

- None of the following can be used on a non-AGP clinic currently: high-speed air-turbine handpiece, slow speed air-motor handpiece with water spray, electric micro-motor handpiece with water spray, 3-in-1 spray (air and water together), Ultrasonic or sonic scaler
- Patients should be ≥2m apart and preferably with some form of physical barrier between them
- Appropriate PPE should be adopted for patient, staff and student. (See Appendix 1)

ASSESSMENT ZONE INFORMATION

- All booked patients should go first to the assessment zone
- Patients should wait in the waiting area with a minimum of one-meter distance between seats.
- Only one patient at a time is allowed in the assessment area.
- Avoid hand shaking or close contact with the patient.
- Wear surgical mask and gloves.
- Ask patient to rub his hands with available hand disinfectant before getting into the office.
- The intern in charge should document the following: (see Assessment card)
  - Full name (in Arabic), exact address, phone number, and I.D number
  - History of current or recent (the past one month) cough, sore throat, fever, fatigue, rhinorrhea
  - History of recent travel abroad or contact with someone who came from abroad
  - Medical history
  - Temperature
- Patients with no signs or symptoms are allowed to get into the clinical area, and assessment card is kept in the patient file.
- Patients with signs/symptoms or recent travel abroad or contact with someone who came from abroad should be advised to reschedule a new triage appointment after two weeks.
Assessment card / Screening for dental appointment

*Patients with positive score to ANY OF THE STARRED FINDINGS should be RE-SCHEDULED for another triage visit after two weeks regardless of their total score

*Patients with score <2 can be treated in students’ dental clinics

Triage category: Please tic the box

CLEAR  RE-SCHEDULE
Patient Information

Dear patient / dear patient,
please review the following information before attending the clinic, as it will help us ensure your safety and the safety of other patients.

You may notice some changes in the way you attend the clinic. These changes are to ensure patient safety.

Please cooperate with the medical staff and follow the instructions.

Please do not attend the clinic without a prior appointment.

Please do not attend the clinic if you are experiencing any of the following:
- Fever
- Cough
- Runny nose
- Neck pain
- General tiredness or fatigue

If you have a scheduled appointment via phone, please go to the patient classification office to register and have your vital signs measured.

Please arrive at your scheduled time and do not bring anyone else unless it is necessary.

You will be notified by phone of any further information or instructions regarding your visit or general safety.

In case of a booked appointment, call the clinic to notify them of your arrival.

In case of a no-show, your appointment will be canceled and you will be rescheduled.

Please note that failure to attend the clinic following these guidelines may result in the cancellation of your appointment.

In case of a scheduled appointment, please notify us if you are unable to attend.

In case of an emergency, please call the clinic directly.

Should there be any questions or concerns, please do not hesitate to contact the clinic.

Thank you for your cooperation and understanding.
